APPLIED NUMERICAL MATHEMATICS

Author Index—Volume 15 (1994)

(The issue number is given in front of the page numbers)

Affouf, M., Numerical study of a singular system of conservation laws arising in enhanced oil reservoirs (1) 1–11

Agoshkov, V.I., A. Quarteroni and **F. Saleri**, Recent developments in the numerical simulation of shallow water equations I: boundary conditions (2) 175–200

Bocharov, G.A. and **A.A. Romanyukha**, Numerical treatment of the parameter identification problem for delay-differential systems arising in immune response modelling (3) 307–326

Brezinski, C. and **M. Morandi Cecchi**, Preface (2) 99–100

Brezinski, C. and **M. Redivo-Zaglia**, Extrapolation methods (2) 123–131

Butcher, J., Preface (3) 305

Calvo, M., J.I. Montijano and **L. Rández**, A polyvalent Runge–Kutta triple (1) 13–26

Carniel, R., A quasi cell mapping approach to the global dynamical analysis of Newton's root-finding algorithm (2) 133–152

Company, R., see **Jódar, L.** (1) 53–63

Dnestrovskaya, E.Yu., N.N. Kalitkin and **L.V. Kusmina**, Lq-decreasing monotonic schemes with complex coefficients and applications to complicated PDE systems (3) 327–340

Falcone, M., P. Lanucara and **A. Seghini**, A splitting algorithm for Hamilton–Jacobi–Bellman equations (2) 207–218

Funaro, D., Spectral elements in the approximation of boundary-value problems in complex geometries (2) 201–205

Glaister, P., An efficient flux difference splitting algorithm for unsteady duct flows of a real gas (1) 27–52

Graves-Morris, P.R., A review of Padé methods for the acceleration of convergence of a sequence of vectors (2) 153–174

Guo, W. and **M. Stynes**, Finite element analysis of an exponentially fitted non-lumped scheme for advection–diffusion equations (4) 375–393

Iserles, A., Convergence acceleration as a dynamical system (2) 101–121

Jackson, K.R., A. Kværnø and **S.P. Nørsett**, The use of Butcher series in the analysis of Newton-like iterations in Runge–Kutta formulas (3) 341–356

Jadic, I., A numerical method for the approximation of singular integrals of functions with a pole of order two (4) 395–406

Janik, T.J. and **S. Jensen**, On the stability and performance of the p-version of the finite element method for first-order hyperbolic problems (4) 407–437

Jensen, S., see **Janik, T.J.** (4) 407–437

Jódar, L., R. Company and **E. Navarro**, Laguerre matrix polynomials and systems of second-order differential equations (1) 53–63

Jorge, J.C. and **F. Lisbona**, Contractivity results for alternating direction schemes in Hilbert spaces (1) 65–75

Kalitkin, N.N., see **Dnestrovskaya, E.Yu.** (3) 327–340

Kusmina, L.V., see **Dnestrovskaya, E.Yu.** (3) 327–340

Kværnø, A., see **Jackson, K.R.** (3) 341–356

Laminie, J., F. Pascal and **R. Temam**, Implementation and numerical analysis of the nonlinear Galerkin methods with finite elements discretization (2) 219–246

Lanucara, P., see **Falcone, M.** (2) 207–218

Lavastre, H., On the stochastic acceleration of sequences of random variables (1) 77–98

Lisbona, F., see **Jorge, J.C.** (1) 65–75

Maroni, P., Modified classical orthogonal polynomials associated with oscillating functions—open problems (2) 259–283

Martins, M.M. and **M.E. Trigo**, On the convergence of the interval MAOR method (4) 439–448

Montijano, J.I., see **Calvo, M.** (1) 13– 26
Moore, P.K. and **L.R. Petzold**, A stepsize control strategy for stiff systems of ordinary differential equations (4) 449–463
Morandi Cecchi, M. and **A. Scarpa**, A space–time finite element method for nonlinear parabolic problems (2) 247–258
Morandi Cecchi, M., see **Brezinski, C.** (2) 99–100

Navarro, E., see **Jódar, L.** (1) 53– 63
Nørsett, S.P., see **Jackson, K.R.** (3) 341–356

Pascal, F., see **Laminie, J.** (2) 219–246
Petzold, L.R., see **Moore, P.K.** (4) 449–463

Quarteroni, A., see **Agoshkov, V.I.** (2) 175–200

Rabinowitz, P., Application of approximating splines for the solution of Cauchy singular integral equations (2) 285–297
Rández, L., see **Calvo, M.** (1) 13– 26
Redivo-Zaglia, M., see **Brezinski, C.** (2) 123–131
Romanyukha, A.A., see **Bocharov, G.A.** (3) 307–326

Saleri, F., see **Agoshkov, V.I.** (2) 175–200
Scarpa, A., see **Morandi Cecchi, M.** (2) 247–258
Seghini, A., see **Falcone, M.** (2) 207–218
Sei, A. and **W.W. Symes**, Error analysis of numerical schemes for the wave equation in heterogeneous media (4) 465–480
Sommeijer, B.P., see **van der Houwen, P.J.** (3) 357–374
Stynes, M., see **Guo, W.** (4) 375–393
Su, C., A domain decomposition method for determining the diffusion coefficient of a two-dimensional linear diffusion equation in the time domain (4) 481–493
Symes, W.W., see **Sei, A.** (4) 465–480
Szafraniec, F.H., Localization in the implicit function theorem: the method and an application (2) 299–303

Temam, R., see **Laminie, J.** (2) 219–246
Trigo, M.E., see **Martins, M.M.** (4) 439–448

Van der Houwen, P.J. and **B.P. Sommeijer**, Butcher–Kuntzmann methods for non-stiff problems on parallel computers (3) 357–374
